Point	Notes
Goal..what would we like to do?	
Any concrete usecases from business?	
Backend only or UI too? In parallel or ok to phase? Can we demonstrate the value without a UI?	
Interact with other systems? Which ones and for what	
Frequency of interaction?	
Regulatory constraints - e.g. GDPR / PCI / PII	
Retention period?	
Any Reports required?	
If UI involved is it to be made available over internet or can be deployed on dedicated workstations?	
Deployment constraints - e.g. cloud only / customer premises / geographical region / 1A premises only	
Targetted customers? Happy to participate in proof of concept?	
Preferred internal and customer delivery dates	
SLA requirements on delivered product	

Point	Notes
Fits best where? : OBE / Streaming data / Big data platform	
Types of transactions	
Impacts to existing products	
Predominant traffic	
Can we live with loss of data?	
What type of DB	
Schema / Collections foreseen	
Retention period	
Interfaces	
LQS / Kafka?	
Stateful / Cache	
Partition / load balance/ nbr of BE or pod proposal?	
Troubleshooting	
Metrics	
Analytics / Reports	
Logs	
Rollout in stages?	
Propose launch customer/proof of concept	
Transactions per second	
DB storage estimated	
Internal re-usability	
Will it easily scale?	
Monitoring	
If UI, any publication / CISO / pen test?	
LSS / other logon security?	
Tech skillset foreseen	
Dependencies - DEVOPS/MDW/Other depts	
Complexity level	
Uncertainities	
OOM	
Misc
